

ELECTRONIC

**THE SPORTS SENSATION
OF THE 80's**

THE MACHINE

Designed as a portable unit, the machine is lightweight and demountable. Towering above the crowd (2.5m) the machine features a state of the art electronic scoreboard to generate positive spectator participation.

The electronic scoreboard flashes the lapsed event time and graphically monitors the progress of the contest to competitors and viewers alike.

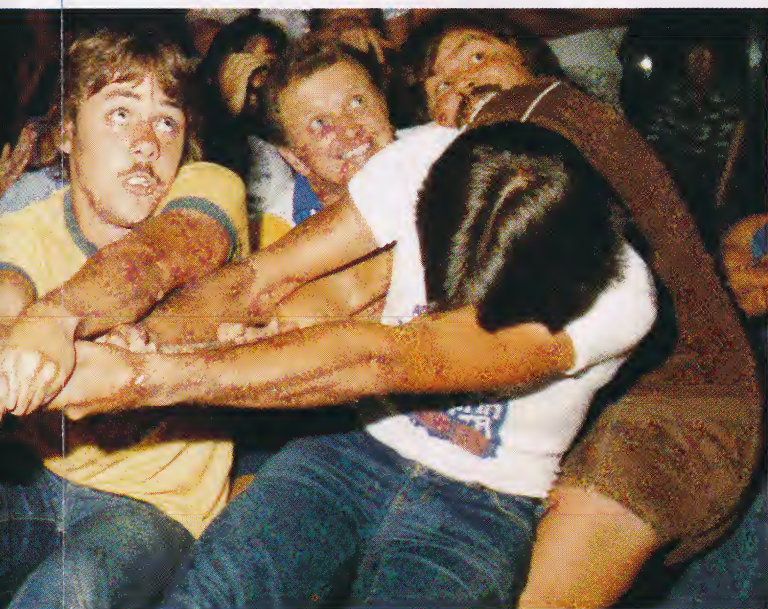

Men, women and especially children, left or right handed, in mixed or family groups can use the machine in fun events or in formal tournaments.

Tournaments involve competitors and teams, divided into similar weight divisions, participating in contests of up to two minutes duration.

*Fun Events...
Or Formal Tournaments*

The Electronic Tug-O-War machine propels the traditional sport of Tug-O-War into the electronic era with the use of state of the art technology to produce a visually exciting machine with a host of safety features which allows this sport to be played indoors, in confined areas.

APPLICATIONS

Ways in which this machine can be utilized include:

- Formal zoned circuit competition
- Gymnasium equipment for educational institutions
- Exercise or physical training equipment for the Armed Forces, police and welfare institutions
- Entertainment in fixed location amusement parks
- Attraction in fairs, shows, rodeos, sporting carnivals and community events
- Physical fitness and training aid for sports clubs and health studios
- Promotional aid for shopping centres and business houses
- Product promotion support
- Leisure equipment for cruise ships and holiday resorts

PROMOTIONAL ASSISTANCE

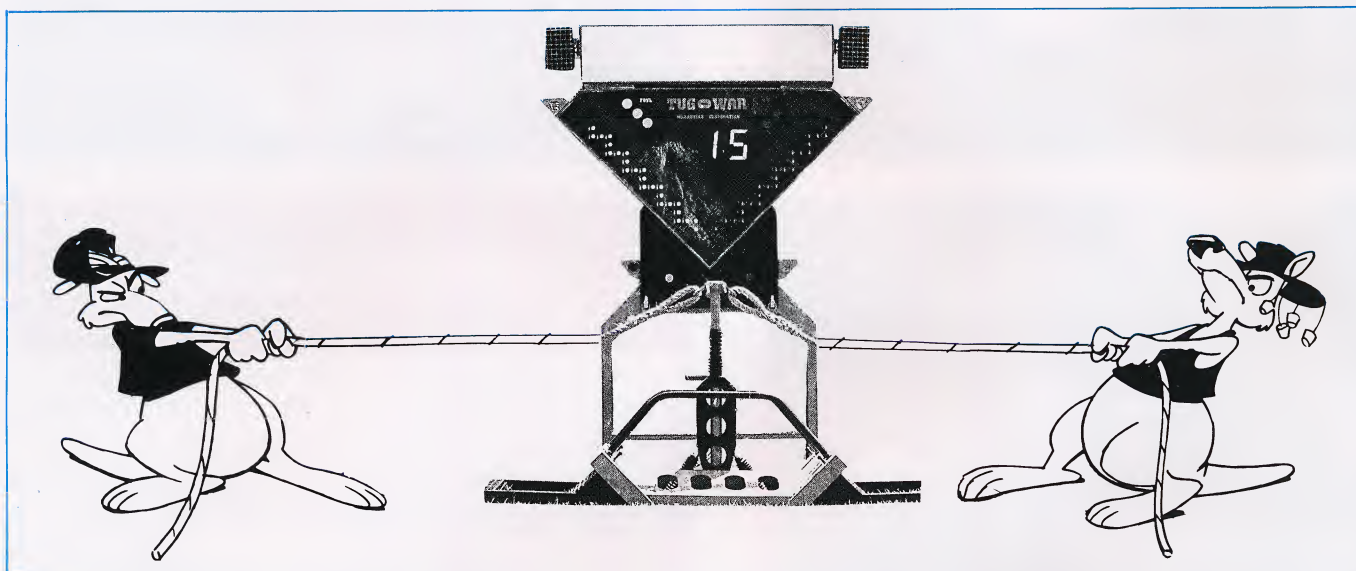

To assist in obtaining the maximum benefit from the machine, 'Digger' and 'Jacko' the Aussie Tug-O-Roos in full size animated costumes have been enlisted together with specially designed Battle flag, poster, gloves, trophies and T-shirt variations, to give the sport yet another dimension.

SAFETY FEATURES

One of the unique aspects of this machine is the use of a hydraulic control system which:

- incorporates an automatic lock on tension arm assembly before and after events, and
- provides resistance in the event of competitors letting go unexpectedly

A specially designed non slip platform ensures equal and secure footholds.
